PROJECTS

- E-Commerce Website**

This e-commerce website project is built using web development technologies such as HTML, CSS, JavaScript, and a server-side language like PHP or Python. Key features include a responsive user interface, product search and filtering, secure payment processing, and order tracking.
- Testing Services Web Project**

A website providing NTS-like testing services with online scheduling and result viewing. Technologies used include HTML, CSS, JavaScript, PHP/Python, and MySQL/MongoDB.
- Weather Forecast Website**

A website providing weather forecasts for various locations with search functionality and real-time updates. Technologies used include HTML, CSS, JavaScript, and APIs from weather data providers like OpenWeatherMap or AccuWeather.
- Currency Converter Web App**

A currency converter web app with real-time exchange rates and support for various currency pairs. Technologies used include HTML, CSS, JavaScript, and APIs from currency exchange rate providers like ExchangeRatesAPI or OpenExchangeRates.
- To Do List App**

A to-do list web app that lets users create, manage and update tasks. Technologies used include HTML, CSS, JavaScript, PHP/Python, and databases like MySQL or MongoDB.
- Pharmacy Management System**

A pharmacy management website for inventory, sales, and customer management. Technologies used include HTML, CSS, JavaScript, PHP/Python, and databases like MySQL or MongoDB.
